PRESS RELEASE

Mega Yacht Defence System

Nobiskrug and Ultra Electronics have developed a 'Mega Yacht Defence System' to significantly increase security on board. Using state-of-the-art technology, the system is scalable to the Owner's wishes and needs. An integrated solution combines the areas of sensors, weapons (non-lethal or lethal) and armour-plating.

Key Features are:

- Continuous Surveillance
- Automatic Alarms
- Effective Defence Management
- Embedded Navigation Support
- Integrated and Secure Communications
- Passive Security

The 'Mega Yacht Defence System' can be integrated into a new build project or refitted in an existing Yacht.

Incidents of Armed Hijacking and Piracy are on the increase. At yacht hot spots it is considered highly desirable to have certain defence equipment available in addition to the standard security system onboard Yachts, in order to provide an increased level of deterrence. Moreover, the transfer of a Yacht from the Mediterranean to the Indian Ocean is a high risk, dangerous and high profile operation. Therefore, a Yacht without appropriate and effective defence equipment and with an untrained crew is totally unprotected; open to attack and boarding and an attractive high value target to any pirates or attackers.

About Nobiskrug:

Nobiskrug stands for the dedication of true German craftsmanship to manufacture custom-built masterpieces from 60 m to 200 m. With more than 100 years of experience in building naval and commercial vessels and its character of being the invader within the mega yacht market, Nobiskrug has demonstrated its expertise of extraordinary quality: uncompromisingly German.

About Ultra Electronics

Ultra Electronics Command & Control Systems is a business within the Ultra Electronics group and has supplied defence and security electronics systems for over 30 years to the UK Ministry of Defence, to major prime contractors and also directly to international military and commercial customers. Ultra Electronics Command & Control Systems has a wide expertise in offering turnkey project, integrated system design and niche product solutions, using in house technology, specialist third party products and Commercial-Off-The-Shelf (COTS) technology.
