

## New Shipbuilding Software Agreement signed today at SMM

The Rendsburg based luxury yacht shipbuilder, Nobiskrug GmbH, today signed an agreement to implement the latest version of AVEVA's shipbuilding software at the shipyard. In the past, the shipyard has used subcontractors to deliver production data in the Tribon system, also from AVEVA. With the decision to install their own system, the shipyard expects increased flexibility in the use of the model database and improved ability to make last minute design changes.

AVEVA Marine is a set of integrated marine design and production applications combined with open and flexible lifecycle management solutions. It provides the fastest, most productive and risk-free way to design, build and operate large, complex ships and offshore vessels.

AVEVA is the world's leading engineering IT software provider to the plant, power and marine industries. Through 40 years of visionary and continual progression, AVEVA has harnessed the power of information technology and transformed entire industries. □
